

1 Abstract of the Disclosure

2

3 A material distribution device having a hopper and a conveyor belt with paddles
4 for removing material from the hopper. The conveyor is pivotally connected to the
5 hopper to be lowered into the top of the material in the hopper and scrape the top layer of
6 material from the load in the hopper off of the load and expel it from the hopper. When
7 the hopper is on a trailer or other vehicle the rate of the conveyor belt can be controlled to
8 distribute the material from the hopper at an even rate.
